

KROSS STOP SMOKE

Stop Smoke is formulated specifically to reduce exhaust emissions in both petrol and diesel engines caused by oil seepage past the piston compression rings, also referred to as blow by smoke.

APPLICATION

Stop Smoke spray is designed to address issues of excessive smoke emission from a vehicle's exhaust system due to burning engine oil. It is applied to reduce or stop oil burning in the combustion chamber, thereby minimizing visible smoke, especially blue or gray smoke. This spray can be used for preventive maintenance or as a temporary solution to extend the time between necessary oil top-ups.

FEATURES

- Reduces oil consumption in engines with significant engine wear
- Minimises exhaust smoke by providing better piston ring sealing
- Improves oil pressure to better protect moving parts
- Provides protection to reduce further wear
- Restores compression

TECHNICAL PROPERTIES

Odour:	Characteristic
Appearance:	Viscous red oil

SIZES & PACKAGING

500 ML
